ASCENT DEV KIT

Welcome to the ASCENT Development Kit.

This kit contains everything you need to understand the project, your assigned tasks, and how to contribute.

You do not need to understand the entire system before starting. Follow the documentation, understand your task, use AI tools responsibly, and build step by step.

What is ASCENT?

ASCENT is the digital platform being built for the ASCENT Technical Club.

The platform will help manage the club's technical ecosystem, including members, opportunities, applications, projects, events, and internal operations.

We are building this in phases. Do not attempt to build features outside the current phase.

Start Here

Follow this order:

1. Understand the Project

Read:

- `01_CONTEXT.md`

Understand what ASCENT is, why we are building it, and what the platform is expected to become.

2. Understand the System

Read:

- `02_ARCHITECTURE.md`

You do not need to memorize everything. Just understand how the different parts of the system connect.

3. Read the Rules

Read:

- `03_RULES.md`

These rules exist to keep the project consistent and prevent unnecessary chaos.

4. Understand the Workflow

Read:

- `04_WORKFLOW.md`

This explains how we work as a team.

5. Open Your Assigned Phase

Go to:

```
PHASE_0/
```

Then open the task relevant to you:

- `FRONTEND_TASKS.md`
- `BACKEND_TASKS.md`

Read your assigned task completely before writing code.

How We Work

Our development workflow is simple:

```
Understand
    ↓
Plan
    ↓
Build
    ↓
Test
    ↓
Review
```

```
    ↓
Submit
```

Do not blindly generate an entire project using AI.

Before implementing anything:

1. Understand the task.
2. Ask AI to explain the implementation plan.
3. Identify the files that need to be changed.
4. Implement step by step.
5. Test your work.
6. Review your code.
7. Submit your work.

AI-Assisted Development

AI tools are encouraged.

Recommended tools include:

- Cursor
- Antigravity
- Gemini
- OpenCode
- GitHub Copilot

However, AI is an assistant, not the project architect.

Before asking an AI agent to write code, give it the project context.

Use:

```
AI_PROMPT.md
```

The AI should understand the project documentation and your assigned task before generating code.

Never blindly copy code you do not understand.

At minimum, understand:

- What the code does
- Which files it modifies

- How it connects to the system
- How to test it

Important Rules

- Do not work outside your assigned task.
- Do not introduce random technologies.
- Do not change another person's work without discussion.
- Do not rewrite major parts of the project unnecessarily.
- Do not blindly accept AI-generated code.
- Keep commits focused and meaningful.
- Ask for clarification before making major architectural decisions.

Current Development Phase

Phase 0

We are currently working on the foundation of the ASCENT platform.

The goal of this phase is to establish the project structure and core technical foundation.

Check:

```
PHASE_0/
```

for your assigned tasks and completion checklist.

Dev Kit Structure

```
ASCENT DEV KIT/
│
├── README.md
│
├── 01_CONTEXT.md
├── 02_ARCHITECTURE.md
├── 03_RULES.md
├── 04_WORKFLOW.md
│
```

```
├── PHASE_0/
│   ├── FRONTEND_TASKS.md
│   ├── BACKEND_TASKS.md
│   └── CHECKLIST.md
│
└── AI_PROMPT.md
```

Final Principle

Keep it simple.

Understand before building.

Build before optimizing.

Test before submitting.

Do not create complexity unless the problem actually requires it.

ASCENT is being built as a team. Your contribution should make the system stronger, not more complicated.
